## Regex Assignment

The data is present in baby1998.html file. The data is the baby names sorted by popularity for the year 1998.

1. Create a function for the following questions in python
2. Find a way to get this data into python list and print the data.
3. Find and extract the year and print it
4. Extract the names and rank numbers and print them
5. Get the names data into a dictionary and print it. Store data into a dictionary using each name as a key and that name's rank number as the value.
6. Build the [year, 'name rank', ... ] list and print it. The list format should be 'year' followed by name and rank in ascending order

e.g: ['1998',  
'Aaliyah 222',  
'Aaron 37',  
'Abbey 408',  
'Abbie 603',  
'Abbigail 612',  
'Abby 194',  
'Abdul 970',  
'Abdullah 897',.....]
